

REQUEST FOR PROPOSAL

For

**”Invasive Plant Species Assessment and
Monitoring”**

RFP#15-000

This RFP is the first phase of a large scale invasive species project on Coastal Preserve state lands. This RFP is for the **assessment of invasive species populations/distribution** and the **development and implementation of a monitoring plan** within the boundaries indicated on the site description maps provided in the RFP. This RFP does not include invasive species treatment and the successful bidder for this RFP will not be eligible to conduct the treatment phase. The assessment and monitoring plan should be quoted as a fixed price per site and include pre and post treatment assessment and monitoring.

It is the Department of Marine Resources’ desire that the successful vendor will have experience in assessing invasive species and the internal capacity to complete the species assessment and monitoring plan in its entirety.
